

Tributaries[®] Introduces Series 6 Interconnects Made in the USA

Orlando, FL—February 2013— Tributaries proudly introduces a new series of interconnect cables, hand-made in its Orlando, Florida headquarters. The Series 6 line of interconnect cables have a level of performance far above the company's Series 5 and previous models of Series 7 and 9. Developed by celebrated cable designer, Jay Victor, the Series 6 incorporate the same unique performance features of the Series 8 cables, with main difference being the use of a slightly reduced grade of cooper.

- Digital and Video cables made with solid 20AWG conductors that are 1.25% silver plated to create a low resistance path for high frequency signals
- Digital and Video cables can be terminated in the field using the Tributaries' PROFIT[®] Compression connectors designed for RG59
- Audio cables made of individually insulated, dual-gauge conductors, designed to maximize the balance between the bass and midrange/high frequency signals, while improving sonic resolution

Tributaries Series 6 currently includes audio, digital, video and speaker cables. HDMI cables will be available in March 2013. Models are stocked in standard lengths, custom cables are made to order and usually shipped same day; see the Tributaries website for details.

The cables available in the new Series 6 are:

Balanced Audio: Model 6AB

Analog Audio: 6A

Digital Audio: 6AD

Subwoofer: 6S

Composite Video: 6V

Component Video: 6VC

Bi-Wire 2>4 Speaker: 6BW

Standard 2>2 Speaker : 6SP
