

Tributaries® Introduces Series 3 Y Splitters and Cables

Orlando, FL—August 2012— Tributaries® will debut the new Series 3 Y Splitters and Y Cables during the 2012 CEDIA Expo in their booth 4754. The Series 3 additions are vastly improved for better performance, installation ease and offer a sleeker appearance.

Y Splitter

To increase the all-important performance signal transfer, Tributaries moved from 24AWG to 22AWG conductors, making the new Series 3 cable sound even better. Performance is only half the story for any cable—it must also work well within its confines and look great. For ease of installation, the outer dimension of the cable has been reduced making it more flexible, and by reducing the head of the RCA to half of its original length, the Series 3 Y Splitter makes it twice as easy to install in tight spaces! Lastly, the molded breakout with the Tributaries logo proudly placed in the center gives an attractive finish. The Series 3 Y splitters are nine inches in length and available in FMM (female RCA to 2 male RCA) and MFF (male RCA to 2 female RCA) configurations.

Y Portable

The new Series 3 Y cables for Portable Electronics feature 1/8-inch mini stereo plug to two RCA connectors. Sharing the same improvements as the Series 3 Y cables, the Y Portable adds one additional, yet critical improvement—the mini stereo plug has been reduced to half of its size. This decrease in size allows consumers to plug their mini connector into a personal electronic product that

is housed in a protective cover. The Series 3 Y cables for Portable Electronics are available in 2 configurations: a nine inch MFF (male mini stereo to 2 female RCA) and MMM (male mini stereo to 2 male RCA) available in 1m, 2m and 3m lengths.
