

Tributaries® Introduces Surge Suppressor and Line Filter for International Market

Orlando, FL—September 2010—Tributaries proudly introduces the first in a new line of CE approved 220-240V Power products specifically designed for the company's International dealers and distributors. The **PWRC-T2-INT** is a 10A, 2400watt, low-profile surge suppressor and line filter made with IEC input and output connectors, specially designed, for mounting behind a flat panel TV or subwoofer.

Featuring high performance X3 MOVs (Metal Oxide Varistor), the most efficient MOV surge suppression device in use today, the T2-INT provides 1836 joules of protection from voltage spikes as high as 6000V and current surges up to 72,000A. Key among the advantages of the new X3 MOV design, is its ceramic casing—providing far greater protection from failure and offering faster heat dissipation so the accumulated temperature remains low. Also, because the temperature stays low during a spike, the lifespan of the new type of MOV lasts 10 times longer than a standard MOV. Additional surge suppression is provided for telephone connections and RF signal paths specifically designed for cable, satellite or antenna devices.

Designed with 58dB of line filtration, the T2-INT will filter out interference or “dirty” power while providing optimal audio and video performance. In addition to a front-panel circuit breaker and on/off switch, the T2-INT features a green LED to indicate normal operation of the surge suppression system, while a red LED warns of any unsafe voltage conditions. Supplied with mounting hardware, the T2-INT is extremely flexible with a variety of mounting options providing the best possible installation whether on a wall, rear panel of a display or TV mount. The T2-INT is also both lightweight and compact—weighing just 1.1kg and measuring: 44mm H x 216 mm W x 127 mm D, its well-suited for tight mounting locations.

Packaged in an attractive display carton, the T2-INT is available now either individually or in Master Packs of 5.

About Tributaries®

Established in 1991 in Orlando, Florida, Tributaries® is an acknowledged leader in the design, production, and distribution of high-quality audio and video interconnect cables, speaker wires, accessories, and electronics. The company prides itself on its customer service, and has won the CE industry magazine *Inside Track* Supplier Loyalty Awards a total of 11 times in the past 13 years.
