

Tributaries'® Introduces Revamped Single-Outlet Surge Suppressor

Three-outlet pak brings rotation, surge protection, and AC line filtering

Orlando, FL—Tributaries® Cable, the Florida company that sets the standard for high-performance, high-value accessories and cables for custom home audio and home-theater installations, announces the latest in its growing line of AC line protection devices, the T1A. Designed as an upgrade of the popular T1, the T1A is a single-outlet device providing 540 joules of surge suppression with an added line filtration circuit for clean power.

The T1A is engineered with the X3 MOV (Metal Oxide Varistor), providing the most advanced surge suppression available in a consumer product of its size. This critical single-outlet device is capable of complying with the latest, most difficult surge suppression safety rating: UL 1449 - 3rd Addition.

Designed to physically cover only one receptacle of a dual-outlet pair, the compact size (1 5/8" H X 2 3/16" W x 1 1/4" D) of the T1A, makes it ideal for protecting subwoofers, garage door openers, sprinkler system timers, espresso makers or any other types of household electronics that operate with solid-state electronics.

The T1A features a blue LED indicator light when plugged-in to a live outlet, signaling full protection from the connected component. ***The Tributaries T1A is now available with an MSRP of \$XX each or \$XX for pack of 50.***

The T1A joins recently introduced, T3, triple-outlet flat panel protector with super slim design—a depth of just 1.5 inches. To assure maximum clearance behind a display, the T3 has three edge-mounted AC outlets; two fixed outlets as well as one AC outlet and one RF connection outlet that can be rotated 90° providing variable plug-in

arrangements. The T3 offers substantial surge protection: 1080 joules and the benefit of AC line filtering, substantially reduces the possibility that radio-frequency noise will be induced via the AC supplies of connected audio or audio-video components, as well as a blue “Protected” LED to confirm the unit is working properly.

For consumer peace of mind, the Tributaries T3 exceeds current safety standards and carries multiple UL[®] listings in their relevant categories. Additionally safety measures include RoHS (Restricted of Hazardous Substances) compliancy; meeting or exceeding the requirements of California SB20: The Electronic Recycling Act of 2003. ***The Tributaries T3 is now available with an MSRP of \$50.***

About Tributaries[®]

Established in 1991 in Orlando, Florida, Tributaries[®] is an acknowledged leader in the design, production, and distribution of high-quality audio and video interconnect cables, speaker wires, accessories, and electronics. The company prides itself on its customer service, and has won the CE industry magazine *Inside Track* Supplier Loyalty Awards a total of twelve times in the past thirteen years.
