ONSAT

TrueRTA has custom analyzer software. Other experts claim that the TrueRTA exceeds the performance of many commercial analyzers. Consumers would do well with the TrueRTA. TrueRTA is a software-based audio analyzer for PC systems using just a PC with basic sound card. Features found in TrueRTA include: low distortion signal level meter; crest factor meter; dual trace oscilloscope; high-resolution real time audio spectrum analyzer. When you purchase TrueRTA, it will operate at Level 1, which is free.

Atlantic Technology has announced three Series 1000 in-wall loudspeakers designed to use NetStreams whole-house Internet-protocol (IP) technology. Sonic improvements are made possible by using separate, individually equalized power amplifiers for the tweeter and the woofer—a configuration known as active bi-amplification. The new Atlantic Technology IWTS-4 LCR-IP, IWTS-7 LCR-IP and IWTS-14 LCR-IP loudspeakers are designed for home theater and music applications. Atlantic's exclusive Directional Vector Control (DVC™) electronically directs the sound up or down from the speaker without having to resort to mechanical pivoting tweeters. To help installers control costs, the grilles and frames for the two top models can be purchased separately in advance for \$60 and \$65 each.

Tributaries® Cable has debuted a new home theater AC power manager, the T100, which provides a cumulative power availability of up to 1800 watts. T100 incorporates a new Metal Oxide Varistor (MOV) surge suppression technology for faster response time. Additional surge suppression is provided for telephone connections and RF signal paths specifically designed for cable, satellite or antenna devices. The T100 provides separate AC line filtering, electrical isolation and power conditioning for analog, digital and high-current components. If the supplied voltage to the T100 falls below 90 volts or exceeds 135 volts, the unit will shut down. When the voltage returns to 95/130 volts, the unit will automatically return to its normal status. For added convenience, T100 comes with a circuit breaker reset button on the front panel, USB charging outlets on the front and back panels and a USB gooseneck light that can be plugged in front or back for equipment illumination. The T100 is fully RoHS compliant and features a three-year parts and labor warranty in addition to a \$25,000 warranty on connected equipment.
