

POWER CABLES

Power up.

Hearing is believing. We guarantee Tributaries power cables will provide audible and visual improvements to your system. Tributaries power cables are optimized for 60Hz with insulated solid conductors of sufficient size to favor low frequencies AC signals to support current flow and signal dynamics. For maximum noise reduction alternating lays in cable twisting cancel out magnetic fields eliminating distortion. Triple shielding from RF and EMI noise results in improvements by lowering the noise floor allowing you to hear more and see more recorded information.

Tributaries line of power products were designed to protect and enhance the performance of your expensive electronic equipment. Today most home electronics incorporate sensitive microprocessors that are susceptible to damage caused by power surges, spikes and brown out conditions. Noise is everywhere whether it is Electromagnetic or Radio Frequency Interference, it can be severe enough to adversely affect picture and sound quality in home electronic equipment. By incorporating Tributaries power products into your system you can be assured your system is safe and will perform at its best

Surge Suppression

Tributaries power products are designed with the patented X3 MOV. It is capable of suppressing more energy and dissipates heat faster than other design. More importantly, the patented high-temperature ceramic casing is capable of isolating and containing the excessive heat buildup that could occur during an abnormal surge condition. In the event of a catastrophic surge, Tributaries power is additionally protected by dual temperature fuses that open the circuit and disconnect electronics from the AC line. This will result in the power manager, strip or in-wall device self-sacrificing to protect your equipment. Tributaries power products provide you with the ultimate safety protection for your valuable electronics.

Under/Over Voltage Protection

Electrical components can also be damaged by under voltage (brownout) conditions. Sensitive parts can be damaged and power supplies can overheat. The microprocessor controlled PWRI-PRO is designed to protect against both over voltage and under voltage conditions. If the incoming voltage exceeds 135 volts, the unit will shut down outlets automatically resetting when the voltage drops back to 130 volts. If the incoming voltage drops below 90 volts, they will shut down, automatically resetting when the voltage returns to 95 volts.

Line Filtering & Isolation Circuits

Tributaries power products feature active filters to keep electronic noise from contaminating your A/V system's delicate audio and video signals. Appliances and other electrical equipment in today's homes contain motors and micro-processors that generate electronic noise. As these appliances cycle on and off, extraneous noise is generated and propagated throughout the home's AC electrical system. By greatly reducing this noise, Tributaries power products ensure your electronics will yield significant performance improvements including increased dynamic range, reduced harshness and the emergence of low level details that were previously masked by noise.

POWER CABLES

For Power Cables, there are three main areas of concern; low frequency signals, current carrying capacity and noise reduction. Recognizing the fact that an AC signal from a wall outlet operates at 60Hz, the Tributaries Power Cables are designed with solid conductors of sufficient size to favor low frequencies, support current flow and signal dynamics. Noise rejection is critical, Tributaries Power Cables rely on propriety winding techniques and triple shielding to limit EMI (Electromagnetic Interference) egress and ingress thus ensuring the lowest noise floor for sensitive components. Power cables are sold in each.

SERIES 8 POWER CABLE

MODEL: 8P-C7 MKII

Reference Grade Audiophile Power Cable

All Series 8 audio cables are meticulously assembled by hand in Orlando, Florida. Series 8 MKII 2-POLE Power cables begin with extremely high-grade linear crystal copper (LC-OFC) developed specifically for audio applications. Tributaries 8P cables are designed to support low frequency 50/60Hz signals. Current capabilities of power cables are a major concern. Power amps tend to draw current in pulses. Depending on the output of the power amplifier, too small a gauge of the power cable will result in excess resistance that may restrict the peak level of a required pulse limiting the transient response of the amplifier, but if only large conductors are used the cable tends to lose dynamics and also will not respond quickly to transients; the Series 8 power cables are designed with a unique combination of individually insulated large and medium gauge wires to form an overall 12 AWG design supporting current flow and signal dynamics. The Mark II cables are silver-soldered to Tellurium (TE) copper termination pins which mate perfectly with the new Tributaries power connectors allowing the greatest amount of contact area possible for perfect signal transfer. Noise rejection is key factor in the design of an AC power cable. The 8P alternates the twisted lays in each multi-gauge conductor. Alternating lays cancels all levels of magnetic distortion. Triple shielding is employed to prevent outside noise from penetrating the signal. The Mark II power cables will lower the noise floor without restricting audio dynamics leaving you with more of the recorded audio and video for crystal clear dynamic experience.

The Series 8 Mark II 2-POLE power cable is stocked in each in lengths from 3 foot, 6 foot and 9 foot with custom lengths available

Model 8P-C7 Mark II Highlights

- Hand crafted by skilled artisans in Orlando Florida, USA
- 2-Pole 15Amp Straight IEC C7 > Straight 3-Pole AC power cable
- Large 12AWG LC-OFC wires don't starve power amps of power
- Multi-gauge geometry design is optimized for low frequency AC signals of 50/60Hz with triple shielding ensure low noise transfer
- Non-magnetic nylon power connectors are both durable and light-weight
- PVC dielectrics isolate vibration from alternating current from entering the signal path.
- Decorative woven jacket over Rugged black PVC jacket
