

POWER STRIPS

Hearing is believing. We guarantee Tributaries power cables will provide audible and visual improvements to your system. Tributaries power cables are optimized for 60Hz with insulated solid conductors of sufficient size to favor low frequencies AC signals to support current flow and signal dynamics. For maximum noise reduction alternating lays in cable twisting cancel out magnetic fields eliminating distortion. Triple shielding from RF and EMI noise results in improvements by lowering the noise floor allowing you to hear more and see more recorded information.

Tributaries line of power products were designed to protect and enhance the performance of your expensive electronic equipment. Today most home electronics incorporate sensitive microprocessors that are susceptible to damage caused by power surges, spikes and brown out conditions. Noise is everywhere whether it is Electromagnetic or Radio Frequency Interference, it can be severe enough to adversely affect picture and sound quality in home electronic equipment. By incorporating Tributaries power products into your system you can be assured your system is safe and will perform at its best

Surge Suppression

Tributaries power products are designed with the patented X3 MOV. It is capable of suppressing more energy and dissipates heat faster than other design. More importantly, the patented high-temperature ceramic casing is capable of isolating and containing the excessive heat buildup that could occur during an abnormal surge condition. In the event of a catastrophic surge, Tributaries power is additionally protected by dual temperature fuses that open the circuit and disconnect electronics from the AC line. This will result in the power manager, strip or in-wall device self-sacrificing to protect your equipment. Tributaries power products provide you with the ultimate safety protection for your valuable electronics.

Under/Over Voltage Protection

Electrical components can also be damaged by under voltage (brownout) conditions. Sensitive parts can be damaged and power supplies can overheat. The microprocessor controlled PWRI-PRO is designed to protect against both over voltage and under voltage conditions. If the incoming voltage exceeds 135 volts, the unit will shut down outlets automatically resetting when the voltage drops back to 130 volts. If the incoming voltage drops below 90 volts, they will shut down, automatically resetting when the voltage returns to 95 volts.

Line Filtering & Isolation Circuits

Tributaries power products feature active filters to keep electronic noise from contaminating your A/V system's delicate audio and video signals. Appliances and other electrical equipment in today's homes contain motors and micro-processors that generate electronic noise. As these appliances cycle on and off, extraneous noise is generated and propagated throughout the home's AC electrical system. By greatly reducing this noise, Tributaries power products ensure your electronics will yield significant performance improvements including increased dynamic range, reduced harshness and the emergence of low level details that were previously masked by noise.

POWER STRIPS

High Performance power strips should provide protection from power surges while simultaneously improving the performance of a system by removing electronic noise. Tributaries' Power strips are designed with the X3 MOV, the most advanced MOV available. The X3 MOV design combines high-energy dissipation and extreme heat containment with fused circuits to provide you with the ultimate safety protection for your valuable electronics. Appliances and other electronic equipment in today's homes contain motors and micro-processors that generate electronic noise. As these appliances cycle on and off, extraneous noise is generated and propagated throughout the home's AC electrical system. By greatly reducing this noise, Tributaries' power strips ensure your electronics will yield significant performance improvements including increased dynamic range, reduced harshness and the emergence of low level details that were previously masked by noise. Power strips are sold in each.

STRIP SERIES POWER CONDITIONER

MODEL: PWRS-T1A

High Performance Power Outlet

Tributaries T1A is a single outlet power plug that provides surge protection and noise filtration. For its small size, the T1A is the most advanced surge suppression available in a consumer product. This small model packs 540 joules of surge protection. To protect your valuable equipment, Tributaries T1A utilizes the X3MOV and packs 540 joules of surge suppression into its small size. The X3 MOV is the most advanced MOV available in today's surge technology. It is capable of suppressing more energy, faster. Tributaries Power Strips feature active filters to keep external noise from contaminating your electronics performance. Everything in a home with a motor or micro-processor generates background electronic noise. By greatly reducing this noise your electronics will yield significant performance improvements including increased dynamic range, reduced harshness and low level details that were previously masked by noise. The T1A is a great solution for protecting subwoofers, garage door openers, sprinkler systems, Espresso makers, in fact, any device that has electronic time readouts.

The T1A fits into any 3-pole grounded outlet

"T1A is small and simple, we use them all over our home to protect everything from our Peloton to our espresso machine. Better safe than sorry!"

Steve V. | Maryland

Model PWRS-T1A Highlights

Made in Vietnam. Designed, tested and packaged in Orlando, FL USA
Single outlet line conditioner with filtering
1800 watts / 15 amps
540 joules of surge suppression
3 UL® certifications and RoHS compliant
5 Year Limited Warranty
